ABSTRACT

Government data indicate that the top five states in net farm income in 1985 were California (\$3.5 billion), Texas (\$2.5 billion), Nebraska (\$1.8 billion), Florida (\$1.8 billion), and Iowa (\$1.7 billion). Cattle and calves and dairy products were the top commodities in cash receipts. Texas led cattle and calf production with \$4.1 billion, and Wisconsin led in dairy sales with \$3 billion. Illinois led in receipts of the next two highest earning commodities, corn (\$3.4 billion) and soybeans (\$1.9 billion). Iowa led in hog sales (\$2.4 billion). California farmers had the largest production expenses (\$11.9 billion), followed by farmers in Texas, Iowa, Illinois, and Nebraska. Under the farm balance sheet accounts, as of December 31, 1985, the leading states in assets, excluding farm households, were Texas, California, Illinois, Iowa, and Minnesota. The state rankings including operator households were the same. California owed the most in total debt (\$15.6 billion), followed by Iowa, Texas, Illinois, and Minnesota. When operator households were included, the rankings remained the same, except that Missouri replaced Minnesota in fifth place. The highest debt/asset ratios excluding farm households were 36 percent in Minnesota, 35.5 percent in Nebraska, 32.1 percent in South Dakota, and 30.7 percent in Wisconsin. States with debt/asset ratios under 10 percent were New Hampshire, Hawaii, Rhode Island, Alaska, and Massachusetts. (This report includes 39 tables of state-by-state data on farm income, cash receipts for various crops and livestock products, government payments, farm production expenses, and real estate and non-real estate farm debt.) ABSTRACT

A financial profile showed that the top five States in net farm income were California, at \$3.5 billion; Texas, \$2.5 billion; Nebraska, \$1.8 billion; Florida, \$1.8 billion; and Iowa, \$1.7 billion. Cattle and calves and dairy products were the top commodities in cash receipts. Texas led cattle-and-calf production with \$4.1 billion, and Wisconsin led in dairy sales with \$3 billion. Illinois led in receipts of the next two highest earning commodities, corn, \$3.4 billion, and soybeans, \$1.9 billion. Iowa led in sales of hogs, at \$2.4 billion.

Keywords: Farm assets, farm debt, net farm income, returns to operators.

SALES INFORMATION

The Economic Indicators of the Farm Sector series of five annual reports is available by subscription. Subscription rates are \$19 domestic; \$23.75 foreign. Request series by name. Send check or money order payable to "Superintendent of Documents" to:

PREFACE

This report is one of five in the Economic Indicators of the Farm Sector series. Other reports are National Financial Summary, Production and Efficiency Statistics, Farm Sector Review, and Costs of Production.

State Financial Summary, 1985, corresponds to the national data published in National Financial Summary, 1985, disaggregated to the State level. Data are reported at the State level for farm income and balance sheet accounts including and excluding farm households.

One major feature is the separation of the operator's household and dwelling from farm production transactions, assets, and debt. All of the income estimates in this report are based on a calendar year.

The data, while mainly based on information from the U.S. Department of Agriculture's National Agricultural Statistics Service and the Census of Agriculture, also include information from other Government agencies and, in some cases, from private sources. Revisions were made for 1978-84, and 1985 State farm income estimates are published for the first time.

This publication was prepared by the staff of the Farm Income Estimation Section and the Farm Financial Analysis Section, Economic Indicators Branch, National Economics Division, Economic Research Service.

Principal contributors and information sources:

Branch chief--James Johnson	(202) 786-1800
Leader for farm income--Roger Strickland	786-1804
Leader for balance sheet--Duane Hacklander	786-1798
Managing editor--Jim Carlin	786-1512
Production expenses--Craig Jagger, Bill Serletis	786-1804
Cash receipts--Billie Whittington, Bob Williams	786-1804
Government payments, CCC loans--Pat Vines	786-1804
Off-farm and other income--Linda Farmer	786-1804
Assets and debts--Ken Erickson, Jim Ryan	786-1798

HIGHLIGHTS

This report details a State-by-State financial ranking of the U.S. farm sector in 1985. Crop production was at high levels, and corn, sorghum grain, oat, soybean, cotton, and potato harvests exceeded 1984 levels. Crop prices were significantly lower. Net farm income for the calendar year was down 7 percent from 1984. Net cash income, which is cash income (regardless of the year of production) less cash expenses, was 12 percent above 1984.

Here's a 1985 financial profile of some major farm States:

Leaders in farm cash receipts were California, at \$14 billion; Texas, \$9.3 billion; Iowa, \$9.2 billion; Illinois, \$7.8 billion; Nebraska, \$7.2 billion; and Minnesota, \$6.5 billion. Texas, Iowa, California, Nebraska, and Wisconsin led in livestock receipts. California, Illinois, Iowa, Texas, and Florida led in crop receipts.

Top earners in cash receipts for major individual commodities were Texas for cattle and calves; Wisconsin for dairy products; Illinois and Iowa for soybeans, corn, and hogs; Kansas for wheat; Arkansas for broilers; and California for greenhouse and nursery products, eggs, hay, tomatoes, grapes, sugar beets, and lettuce.

Top earners in net cash income were California, at \$3.9 billion; Texas, \$3 billion; Iowa, \$2.8 billion; Illinois, \$2.4 billion; and Nebraska, \$2.3 billion. Net farm income (with inventory adjustment) was led by California, at \$3.5 billion; Texas, \$2.5 billion; Nebraska, \$1.8 billion; Florida, \$1.8 billion; and Iowa, \$1.7 billion.

California farmers had the largest production expenses, \$11.9 billion, followed by farmers in Texas, \$9.6 billion; Iowa, \$8.9 billion; Illinois, \$7.3 billion; and Nebraska, \$6.8 billion.

Under the balance sheet accounts, the leading States in assets, excluding farm households, as of December 31, 1985, were Texas, at \$83.8 billion; California, \$57.6 billion; Illinois, \$43.8 billion; Iowa, \$42.5 billion; and Minnesota, \$29.9 billion. The State rankings including operator households were the same.

California owed the most total debt, at \$15.6 billion, followed by Iowa, \$15.1 billion; Texas, \$13.3 billion; Illinois, \$11.2 billion; and Minnesota, \$10.8 billion. The State rankings stayed the same when households were included.

Texas registered the largest equity, at \$70.5 billion, followed by California, \$42.0 billion; Illinois, \$32.6 billion; Iowa, \$27.4 billion; and Minnesota, \$19.1 billion. When operator households were included, the rankings remained the same, except Missouri replaced Minnesota in fifth place.

The highest debt/asset ratios excluding farm households were 36 percent in Minnesota; Iowa, 35.5 percent; Nebraska, 35.3 percent; South Dakota, 32.1 percent; and Wisconsin, 30.7 percent. States with debt/asset ratios of under 10 percent were New Hampshire, 6.4 percent; Hawaii, 7.9 percent; Rhode Island, 8.1 percent; Alaska, 8.6 percent; and Massachusetts, 9.0 percent.

note....

The U.S. Department of Agriculture (USDA) has published comprehensive income estimates relating to agriculture since the mid-1920's. The series has been revised and expanded, incorporating individual State estimates in 1949 and sales class distributions in 1960. In 1980, new accounts were developed to separate the earnings of the farm business unit from farm family income. These accounts, along with the former accounts, are included in this publication.

The production sector accounts measure the economic viability of the production units (establishments) of the farm sector (a part of the business sector of the national economy) apart from the well-being of the farm operator families (a part of the household sector of the national economy). Information on the nonfarm assets and debts of farm operators is limited and is not reported in this publication.

In this report, the State income accounts include data for calendar years 1976 through 1985. The balance sheet accounts include data for December 31, 1981, through December 31, 1985.

This publication consists of an income section and a balance sheet section. Table titles indicate whether farm operator household transactions are included or excluded. In the income accounts, net farm income is the only account that is computed on an including-households basis. The other three measures--net cash income, net business income, and returns to operator--exclude household transactions. The returns-to-operators measure is equivalent to net farm income with household transactions excluded.

The terms "farm" and "establishment" represent the place where the production process occurred. In this report, the establishment concept used for 1977 and following years is based on the official Census farm definition adopted in 1974 which includes places with annual sales, or potential sales, of \$1,000 or more.

Households include all families or individuals receiving income from the agricultural production sector. The household category emphasized in this report is farm operators, although some of the tables include landlord and employee categories. The operator category includes owners and tenants, as well as managers associated with corporate or institutional establishments.

Economic Indicators of the Farm Sector

State Financial Summary, 1985

1985 AGRICULTURE WRAP-UP

Net cash income from farming in 1985 increased by \$4.7 billion to \$44 billion. It had been fairly stable since 1978, staying within the relatively narrow range of \$33-\$39 billion, despite considerable fluctuation in the production of major crops. This income category also includes direct Government payments and income from customwork and machine hire. Farmers increased cash income with higher sales of cotton and feed crops, particularly corn. In anticipation of lower market prices due to market conditions and farm legislation effective in 1986, farmers chose to increase sales of corn and cotton between harvest and year's end, with much of the eligible production being placed with the Commodity Credit Corporation (CCC). Farmers saw an opportunity for higher receipts because the CCC paid more than the marketplace. Cash receipts from cattle and hog sales declined and may continue to fall as the selloff of the cattle herd accelerates and the hog breeding stock continues to decline.

Net farm income declined to \$30.5 billion, down 7 percent from the year before. This measure, unlike net cash income from farming, includes household and noncash income and expense items, such as home consumption of products by family and resident hired labor, depreciation of farm capital, gross rental value and expenses associated with the farm dwelling, and the value of inventory change. The minus \$1.1-billion change in inventory resulted from the sales of commodities produced in prior years but held for future sale. This amount was subtracted from 1985 gross income.

Farm production expenses fell 4 percent to \$136.1 billion. Large reductions in interest paid and capital consumption (depreciation) accounted for most of the drop, but there were generally modest reductions in most expenses. The decline in expenses was noteworthy both for its direction and magnitude of change. Expenses had declined only once in over 30 years and that was by a small amount in 1983 when the payment-in-kind (PIK) program left millions of acres fallow.

We traced the long-term increase in production expenses from 1953 to 1984 to increasing investment in agriculture, the rising purchases of manufactured inputs, and inflation. In 1985, interest rates and average outstanding debt declined significantly, contributing to an 11.5-percent decline (\$2.43 billion) in interest expenses. The continued curtailment of capital investment led to an 8-percent reduction (\$1.9 billion) in depreciation and accidental damage. Also, producers trimmed overall spending.

Total farm assets (excluding operator households) fell 9.9 percent to \$771.4 billion on December 31, 1985, and farm real estate values dropped from \$640 billion to \$560 billion. Although outstanding farm debt fell \$6.6 billion, the debt/asset ratio rose 6.8 percent, from 23.2 percent to 24.9 percent.

STATE INCOME ACCOUNTS

Table 1 summarizes major income statistics; table 2 shows cash receipt rankings by commodity; table 3 shows cash receipt rankings by State. Table 4 presents income measures and components by State for a 10-year period. Other tables present cash receipts by commodities, farm production expenses by State, and Government payments by program and State.

Rankings by Commodity and State

In 1985, California led in cash receipts from all commodities with \$14 billion. California led in total sales of all crops and ranked third in total livestock earnings. California was also the top producer of greenhouse and nursery products, eggs, hay, tomatoes, grapes, sugar beets, and lettuce. California finished a close second to Texas in cotton.

Texas ranked second in cash receipts sales with \$9.3 billion, including the highest sales of livestock and fourth highest crop sales. Texas was the leading producer of cattle and calves, cotton, and sorghum grain. Iowa, a principal crops and livestock producer, ranked third in all commodities, second in all livestock, and third in crops. Illinois ranked fourth in all commodities, and Nebraska ranked fifth. California, Texas, Iowa, Illinois, and Kansas ranked as the top States in cash receipts for all commodities in 1984; Texas led in livestock receipts and California in crop receipts. The proportion of total cash receipts remained fairly stable with the top five States having 35 percent of the total cash receipts in 1974, 35 percent in 1979, and 33 percent in 1983, 1984, and 1985.

Net Farm Income

Net farm income is a measure of the net value of production occurring within a given year. Unsold and unused portions of new production are valued and added to sales in deriving net farm income. Sales from beginning-year inventories are deducted to eliminate the effects of production from prior years. Inventories typically rise during years of heavy production and decline when production is below normal.

The net farm income accounts differ from the net cash income, net business income, and production transactions accounts by the inclusion of farm household income. The farm household accounts affect both the income and expenses in net farm income. The imputed rental value of all farm dwellings is included as income. We include the expenses for these dwellings, such as repair and operation, interest, taxes, capital consumption, and miscellaneous expenses. The impact of the dwelling tends to increase with the degree of urbanization. In the more urbanized areas, residential real estate values are usually higher and farms are usually smaller. Thus, the ratio of the value of the residences to the value of farmland is usually higher. The five leading States in net

farm income were California, at \$3.5 billion; Texas, \$2.5 billion; Nebraska, \$1.8 billion; Florida, \$1.8 billion; and Iowa, \$1.7 billion. Three States recorded negative net farm income: Montana, at -\$366 million; Wyoming, -\$72 million; and West Virginia, -\$27 million. Cattle and calves led commodity sales for all three States.

Net Cash Income

Cashflow status is an indicator of the short-term financial situation of the farm sector. Although the wealth and income situation of the average farm operator may be adequate, the cash flow may be inadequate to meet current obligations, thus causing financial difficulties. Inadequate cash flow may not be unusual for beginning farmers and for those who may recently have purchased land financed at high interest rates.

Net cash income is an indicator of funds generated by the business for loan principal payments and other essential expenditures. Net cash income is a function of all cash transactions (and share rent), including sales of commodities produced in prior years and sold out of inventory. Net cash income does not include noncash items such as the imputed rental value of farm residences and the value of food consumed on farms where produced, depreciation, and value of inventory change.

State cash income differs from the production transactions table in that only cash transactions enter the calculations. Net inventory change, rental value of hired laborers' dwellings, and home consumption are not cash items and are not included in receipts. Cash uses include only expenses that are cash transactions. Capital consumption is a noncash expense and is not included. The perquisites for hired labor are also excluded. Cash income from farming measures the cash available for capital asset purchases, loan retirement, and operator household cash income. Cash income from farming is generally higher than returns to operators, because noncash expenses usually exceed noncash income due to large depreciation allowances.

Net cash income from farming for the United States rose to \$44 billion from \$39.3 billion in 1984. Cash income from farming in 1985 was highest in California, at \$3.9 billion, followed by Texas, \$3 billion; Iowa, \$2.8 billion; Illinois, \$2.4 billion; and Nebraska, \$2.3 billion. In 1984, the top earners were California, Texas, Iowa, Florida, and Nebraska.

Net Business Income

Net business income is a measure of earnings by farmers. We used accounting methods that better correspond to those used by farmers in computing their income for purposes of taxation. Under the Internal Revenue Service's cash accounting method used by most farmers, profit is computed as payments received less payments made and depreciation. Net business income is net cash income less capital consumption. Capital consumption is defined as the sum of depreciation and accidental damage. In recent years, net business income has approximated net cash income but at a slightly lower level, reflecting the additional noncash deduction for capital consumption. The reason is that capital consumption has changed little for several years. In 1985, net business

income increased relative to net cash income as farmers pared capital expenditures for depreciable items by 19 percent. As a result, net business income from farming increased 32 percent compared with a 12-percent increase in net cash income.

Net business income was \$26.4 billion in 1985, up from \$20 billion in 1984. California led with \$3.2 billion, followed by Texas, \$2 billion; Florida, \$1.7 billion; Nebraska, \$1.6 billion; and Iowa, \$1.6 billion.

Farm Production Transactions

In the transactions summary, the residual is returns to operators, which is computed as gross receipts less both nonfactor payments and factor payments. The returns to operators category differs from net farm income in the exclusion of the imputed rent and expenses associated with the operators' dwellings.

Production expenses under the production transactions accounts are divided into nonfactor and factor payments. Nonfactor payments include intermediate production expenses of nonfarm origin, such as fuel, repairs, fertilizer, and pesticides, and of farm origin, such as seed, feed, and livestock purchased. Other nonfactor payments include capital consumption and business taxes.

Capital consumption, used to capture the expense for the flow of services (such as wear and tear and obsolescence) provided by durable goods during the period, includes depreciation and accidental damage of the capital stock. The current expense of capital consumption is measured as the value of the addition to capital stock, which would ensure that the serviceability of the capital stock at the beginning of the period is equal to its serviceability at the end of the period. The maintenance of stock, therefore, requires that capital consumption be valued on a replacement value basis rather than based on the original purchase price.

Factor payments are the income available to provide returns to the factors of production: land, labor, and capital. These returns are interest, wages to hired labor, net rent to nonoperator landlords, and returns to operators. Returns to operators are the portion of income left to the operators as the returns for their own labor and management of owned factors of production used in farming. California led the Nation in returns to operators, at \$3.3 billion, followed by Texas, \$2 billion; Nebraska, \$1.7 billion; Florida, \$1.7 billion; and Iowa, \$1.5 billion. In 1984, California led in total returns to operators at \$3.2 billion, followed by Iowa, \$1.9 billion; Florida, \$1.7 billion; Texas, \$1.7 billion; and Illinois, \$1.4 billion.

Factor payments for the United States in 1985 decreased to \$61.4 billion from \$64.5 billion. Nonfactor payments decreased to \$94.7 billion from \$97.9 billion. Returns to operators decreased nationally to \$25.7 billion from \$26.9 billion. Only four States had negative returns in 1985: Montana, -\$417 million; Wyoming, -\$97 million; West Virginia, -\$50 million; and Nevada, -\$8 million. The common thread seems to be that, again, cattle and calves were the top-ranked receipts category for each of the four States.

Returns to farm production resources in 1985 changed little from 1984, especially in States dependent on grains and livestock, such as in the Corn Belt. Favorable weather conditions maintained production at or near record levels contributing to stable returns to farm resources. California, Florida, and Texas continued to enjoy strong income positions because of the diversity and size of their agricultural production.

Production Expenses

Production expenses in the transactions accounts and net farm income accounts differ in that expenses associated with operators' dwellings appear in the net farm income accounts but not in the transactions accounts. Contract labor is now a part of wages under both farm income accounts. Previously, contract labor was a part of the service accounts (machine hire, customwork, and contract labor) in the transactions account. In all of the income accounts, net rent to nonoperator landlords is an expense, because it represents payment by the farm sector for the use of land and buildings owned by a nonfarmer. Payment to a farmer-landlord is an exchange of funds between farmers and generates no net income effect within the sector.

Total U.S. production expenses including households decreased to \$136.1 billion from \$141.7 billion. The leading States in production expenses in 1985 were California, at \$11.9 billion; Texas, \$9.6 billion; Iowa, \$8.9 billion; Illinois, \$7.3 billion; and Nebraska, \$6.8 billion. The order was unchanged from 1984.

STATE BALANCE SHEET ACCOUNTS

The farm sector balance sheet estimates the current market value of assets, debt (liabilities), and net worth or wealth (assets minus liabilities). Starting with last year's publication, the balance sheet date is as of December 31 instead of January 1. For example, what would have been estimated on January 1, 1986, is now December 31, 1985. The day's difference makes it easier to compare income figures to the balance sheet data because calendar-year income data correspond to end-of-year balance sheet data.

The farm sector may be viewed either as a business (excluding personal assets and liabilities of farm households) or as a firm/household (including both farming and personal activities of farm households). Both the including- and excluding-operator-households accounts include the landlords' and the farm operators' farm assets and debt. The account that includes operator households also includes part of the farm family's personal assets, such as the value of the operator dwelling if located on the farm, the value of farmers' household equipment and furnishings, the portion of automobiles and trucks used for nonfarm purposes, time deposits, savings bonds, and the related debt on these items. These items were included because the personal welfare of many small farmers are tied to the welfare of farming operations as they were when this account was established in 1945. The account that excludes farm operator households also excludes the farm family's personal assets and debt.

Revisions

We revised the State-level accounts last year, mostly by incorporating data from the 1982 Census of Agriculture. There has been a major change in the way State-level debt for the Farm Credit Administration (FCA) lenders is calculated. In years before December 31, 1983, FCA provided the Economic Research Service (ERS) with information, by State, on agricultural loans outstanding held by the Federal Land Banks, Production Credit Associations (PCA's), and Federal Intermediate Credit Banks. For December 31, 1983, 1984, and 1985, FCA provided only outstanding loans, by district. We derived State figures by using the distributional pattern of the loans outstanding for December 31, 1982, and applied this same pattern to the district totals. In 1985, FCA furnished revised data on outstanding loans held by Federal land banks and PCA's for December 1974 through December 1984. The revised figures incorporated the nonaccrual loans inadvertently left out by the FCA. We assigned the revised figures to States based on the State distributional pattern of loans for each year. Also, beginning with last year's publication, we applied the same methodology for calculating Alaska and Hawaii farmland values as we used for the other 48 States. Finally, revisions have been made in the U.S.- and State-level debt series back to 1980 (tables 28-39).

Assets

In 1985, real estate assets were 72.5 percent of total farm asset values, showing that fluctuating real estate values strongly affect total farm assets. Total U.S. farm assets, excluding operator households, fell to \$771 billion on December 31, 1985, off 23.1 percent since 1980, the year of peak equity. U.S. farm real estate values declined 28.2 percent between 1980 and 1985, while nonreal estate values declined by 9.7 percent. Texas was the only major agricultural State that realized an increase in total farm asset values since 1980, with a 31.2-percent increase from 1980 to 1984. However, as Texas farm asset values fell by \$14.1 billion during 1984-85, farm asset values rose by only 12.3 percent during 1980-85. In 1980, Iowa held the highest total asset value of \$82.3 billion, followed by Texas, \$74.6 billion; Illinois, \$73.4 billion; California, \$64.5 billion; and Minnesota, \$49.5 billion. Since then, however, Iowa reported the largest decline in total farm asset values, with a decrease of 48.4 percent during 1980-85. Iowa's real estate values declined 57.9 percent over the same period.

In 1985, Texas led in total farm assets, excluding operator households, with \$83.8 billion. The other leading agricultural States also saw farm assets values fall. California was second with \$57.6 billion in total assets (\$63 billion in 1984), followed by Illinois, \$43.8 billion (\$47.9 billion in 1984); Iowa, \$42.5 billion (\$50 billion in 1984); and Minnesota, \$29.9 billion (\$36.2 billion in 1984).

Debt and Equity

Total U.S. farm debt (excluding operator households) was \$192.1 billion on December 31, 1985, an increase of 12.9 percent since December 31, 1980. Although real estate debt increased 10.8 percent over the same time period, the ratio of real estate debt to total debt fell only slightly from 52 percent in 1980 to 47 percent in 1985. Texas' total farm debt increased most, by 25.4 percent, from

1980 to 1985. California was the leading State in total liabilities, excluding operator households, on December 31, 1985, at \$15.6 billion, down from \$16.7 billion in 1984. Iowa was second in total liabilities, at \$15.1 billion, down from \$15.6 billion in 1984. Texas debt ranked third, \$13.3 billion, up from \$13.1 billion in 1984. Illinois ranked fourth with \$11.2 billion in total debt, up from \$10.8 billion in 1984. Minnesota ranked fifth with \$10.8 billion, down from \$11.1 billion in 1984.

Since 1980, equity in agriculture has fallen as total asset values declined and total debt increased. Equity (excluding operator households) fell \$253.7 billion (nominal dollars) from December 31, 1980, to December 31, 1985. This 30.5-percent decline led to an equity level of \$579.3 billion. Texas, by contrast, was the only leading agricultural State to show an increase in equity, at 10.1 percent, during 1980-85. Iowa realized the greatest decline in equity, at 60 percent. Minnesota showed a 52.8-percent decline; Nebraska, 51.4 percent; Illinois, 49.1 percent; Indiana, 48.7 percent; and Ohio, 44.4 percent. All leading agricultural States showed falling equity levels in 1985.

Debt/Asset Ratio

The debt/asset ratio is a solvency criterion derived from dividing total liabilities by total assets. Solvency refers to the value of assets in relation to the value of liabilities and provides insight into the collateral security of loans. The debt/asset ratio measures the relative indebtedness of the farm business and reflects the amount of risk borne by lenders who lend to farmers and ranchers. However, by themselves, indicators of solvency do not supply information about the income and debt service capacities of farm operators. Mean debt/asset ratios vary considerably, both by type of farm and by level of earnings within a given farm type.

The overall U.S. farm debt/asset ratio (excluding operator households) has risen from 17 percent in 1980 to 24.9 percent in 1985. This rise reflects the decline in farm asset values, which has constrained the sector's borrowing capacity. The declines in farmland values during 1984 and 1985 have continued into 1986 and have been particularly large in the Corn Belt. In Illinois, the debt/asset ratio increased from 12.8 percent in 1980 to 25.5 percent in 1985; Iowa, from 16.8 percent to 35.5 percent; and Indiana, from 16.5 percent to 28.5 percent. In Texas, the debt/asset ratio declined from 14.2 percent to 13.4 percent from 1980-84 but rose to 15.9 percent in 1985. In 1985, Minnesota had the highest debt/asset ratio of all States, at 36 percent, followed by Iowa, 35.5 percent; Nebraska, 35.3 percent; South Dakota, 32.1 percent; Wisconsin, 30.7 percent; Kansas, 30.4 percent; and Georgia, 29.2 percent.

Table 1—Summary of the farm sector's financial status, by State, 1985

Total may not add due to rounding. 1/ Gross farm income includes the value of inventory adjustment. 2/ See table 4 for components of net cash income. 3/ Net business income is defined as net cash income minus the sum of depreciation and accidental damage. 4/ See table 26 for a breakdown of State data on debts/assets.

Number					
Number of farms	2,433,920	2,400,550	2,370,200	2,328,400	2,274,730

See footnotes on next page.

Table 4--Footnotes.

- 1/ Includes operator households.
- 2/ Includes forest product sales, recreational income, and other farm business-related income. Estimates for 1982 and later include income from custom feeding services.
- 3/ Includes machine hire and customwork expenses; marketing, storage, and transportation expenses; and miscellaneous expenses. Definitions and data sources for 1978 and later are not directly compatible with those of earlier years.
- 4/ Includes contract labor expenses, hired labor wages, and Social Security payments.
- 5/ Uses different data sources for periods before 1979, 1979-83, and 1984 and later. Estimates are not directly compatible among periods.
- 6/ Excludes operator households.
- 7/ Cash income less cash expenses and capital consumption.
- 8/ Gross farm income less rental value of operators' dwellings.
- 9/ Gross receipts of farms less nonfactor payments, interest, wages to contract and hired labor, and net rent to nonoperator landlords.
- 10/ Includes off-farm income for members of farm operators' households only.

TABLE 5--CASH RECEIPTS BY COMMODITIES AND COMMODITY GROUPS, UNITED STATES AND STATES, 1983-85

Table 5--Footnotes

*Less than 0.05 percent. Percentages may not be accurate to 0.1 in last digit because of method of machine computation.

NA = not available.

1/ USDA estimates and publishes individual cash receipt values only for major commodities and major producing States. The U.S. receipts for individual commodities, computed as the sum of the reported States, may understate the value of sales for some commodities, with the balance being included in the appropriate category labeled "other" or "miscellaneous." The degree of underestimation in some of the minor commodities can be substantial.

2/ Except for mohair, the livestock commodities include only State estimates of income for which USDA estimates value of marketing for 1983-85. All other estimates, while included in commodity group totals, are not listed separately but are combined as appropriate in "other livestock" to prevent disclosure of confidential data.

3/ Commodities do not add to group total because broilers, turkeys, and minor commodities--turkey eggs, ducks, geese, guineas, and other poultry as estimated--are included in "other livestock" below in order to avoid disclosure of confidential data. All minor commodities may not be estimated in all States.

4/ Cash receipts include value of home consumption.

5/ Commodities do not add to group totals because broilers, turkeys, and mohair for certain States and other minor commodities, such as bees, horses and mules, goats, goatmilk, mink and other pelts, rabbits, catfish, reindeer, and other livestock and products when reported are included for all States in "other livestock" in order to avoid disclosure of confidential data.

6/ See footnotes 3 and 5.

7/ Except for rye, barley, corn, oats, sorghum grain, flaxseed, peanuts, soybeans, dry edible beans, dry field peas, potatoes, sweetpotatoes, citrus fruit, apples, apricots, avocados, cherries, dates, grapes, peaches, pears, plums, prunes, pecans, sugarcane syrup, alfalfa seed, fescue seed, crimson cloverseed, lespedeza, orchardgrass, red cloverseed, sweet cloverseed, timothy, vetch, popcorn, strawberries, forest products, and greenhouse and nursery products, the commodities include only State estimates of income for which USDA estimates the value of production for 1985. Allowances are made in "other" categories for other States as all other estimates, while included in commodity group totals are combined as appropriate in "miscellaneous vegetables," "other berries," "other fruits and nuts," or "other field crops" items.

8/ Includes vegetables produced in the State but for which USDA does not estimate individual values of production.

9/ Includes other melons except honeydews and watermelons.

10/ Gooseberries and other berries.

11/ Includes fruits and nuts produced in the State but for which USDA does not estimate individual values of production.

12/ Includes seeds produced in the States but for which USDA does not estimate individual values of production.

13/ Includes seed and other field crops produced in the States but for which USDA does not estimate individual values of production.

1/ Data are for farms with sales of \$1,000 or more annually. 2/ All crops held on farms including crops under CCC and CCC crops held off farms by farm operators. 3/ Includes debt owed to institutional lenders and to noninstitutional or miscellaneous lenders. 4/ Nonrecourse CCC loans secured by crops owned by farmers. These crops are included as assets. 5/ Total debt in this ratio is an average for the year.
